Today's Points:

- 1 Peripherals are useful for operating a computer.
- 2 Peripherals are necessary for working efficiently.

1 Peripherals are useful for operating a computer.

Main Idea:

Peripherals are useful for operating a computer.

They are devices that you connect to a computer, like a keyboard or mouse.

They help you control the computer easily and do your work better.

1 Peripherals are useful for operating a computer.

Lesson point:

Peripherals are devices that help you use a computer easily.

2 Peripherals are necessary for working efficiently.

Main Idea:

Peripherals are necessary for working efficiently.

They include input devices, output devices, and storage devices.

Input devices like a keyboard and mouse help you put information into the computer.

Output devices like a monitor or printer show or send out information.

Storage devices like a USB drive save your work and data safely.

2 Peripherals are necessary for working efficiently.

Lesson point:

Peripherals help you work fast by inputting, outputting, and saving information.

3 Lesson Summary (Types of Computer Peripherals)

Laptop – A computer with a screen, keyboard, and battery in one body.

Display (Monitor) – Shows pictures and words from the computer.

PC (Computer) – A machine for doing many kinds of work.

Projector – Shows the computer screen on a wall or big screen.

Flash Drive (USB) – Saves and moves files easily.

Keyboard – Used for typing letters and numbers.

Mouse – Used to move the pointer and click on the screen.

Printer (All-in-one) – Prints, copies, and scans documents.

3 Lesson Summary (Types of Cables and Connectors)

USB Type-A – The standard rectangular USB plug. Found on most computers. Used for connecting keyboards, mice, and flash drives.	USB Type-B – Square-shaped plug often used for printers and scanners.	USB Type-C – New, small, and reversible plug. Used for charging and data transfer on new laptops and phones.
HDMI – Sends both video and sound. Commonly used to connect a computer to a monitor, TV, or projector.	Lightning – Special connector for Apple devices such as iPhones and iPads.	VGA – An older connector for video only. Used for monitors and projectors that don't have HDMI.

Each cable has a **male connector (plug)** and a **female connector (port)**.

Always use the **correct cable type** to make sure your devices work safely and properly.
